ShopEasy

Full E-commerce Website

Badr Hassan

Third Grade - Final Project

2026

Project Idea

A complete online shopping platform where users can browse products, add items to cart, and complete purchases. The goal was to create a real-world e-commerce experience with modern web technologies. Built to demonstrate full-stack development skills from database to user interface.

Design Approach

Clean and minimalist interface using Bootstrap for responsive layouts. Mobile-first design ensures the site works perfectly on all devices. Simple navigation with intuitive user experience focused on ease of shopping.

Technologies Used

Frontend
React.js + Bootstrap

Backend
PHP REST API

Database
MySQL

Version Control
Git + GitHub

Key Features

- Product browsing with search and category filters
- Shopping cart with persistent storage
- Complete checkout process with order management
- Responsive design for all devices
- Real-time cart updates and notifications

System Architecture

Frontend

React.js + Bootstrap

↓

Backend

PHP REST API

↓

Database

MySQL

Challenges Faced

Managing state across multiple components required careful planning with React Context API. Ensuring responsive design worked perfectly on all screen sizes needed extensive testing. Connecting frontend to backend and handling data flow was a valuable learning experience.

What I Learned

Full-stack development from database design to user interface implementation. How to build REST APIs and manage data flow between frontend and backend. The importance of clean code, proper documentation, and version control with Git.
